PRESS RELEASE

Paris-La Défense – September, 19 2019

BUREAU VERITAS FRANCE LAUNCHES ITS 'FLIGHT DATA ANALYSIS' SERVICE IN PARTNERSHIP WITH ERGOSS

To support aviation safety improvement in an increasingly connected aeronautic industry, Bureau Veritas offers a service dedicated to Flight Data Analysis, based on Ergoss's SARA software. This offer aims at optimizing flight safety management and more generally the operational performance of airline companies.

With more than 230,000 flights recorded on July 25 2019, this day became the busiest in aviation history, just ahead of the previous record set the day before¹.

Aviation safety is a major issue and the new Bureau Veritas "Flight Data Analysis" solution allows airline companies to benchmark flight operations worldwide.

Bureau Veritas France launches a new service of "Flight Data Analysis" dedicated to airline companies. This solution combines the expertise of data analysts and pilots from Bureau Veritas Aeronautics & Space Agency together with the software SARA, developed by Ergoss, a french start up born in Toulouse.

This solution and its dynamic reporting tools provide real support for decision-making, reinforced by Bureau Veritas experts' knowledge. Thus, airline companies can save valuable time and achieve their objectives more easily with a tool adapted to their specificities and the hazards of air transport.

"We have been working for many years with airline companies on setting up their flight data analysis program. Today, we are very proud to propose, in partnership with ERGOSS, an integrated service combining the best skills in software development, data analysis and aviation safety expertise. Our solution makes flight data analysis a real asset for managing effectively flight safety and operational performance. For example, we have recently conducted an analysis for an airline that led to identify a saving of more than €500 000 through a shift in approaching procedures. Among current customers, the smallest airlines players trust our combined expertise while larger companies are looking for challenging their internal practices" explains **Antoine BLIN, Aeronautics & Space Director, Bureau Veritas France**.

"Ergoss has been collaborating with Bureau Veritas experts in the field of flight data interpretation for several years. The huge collective experience accumulated by our two entities has resulted in a unique collaboration with Bureau Veritas in order to propose a complete assistance service to airlines operators whether they are starting operations, managing an important change or simply outsourcing the solution. This allows Ergoss to pursue developing its innovations and focus on supporting the operators who directly use SARA as a SaaS worldwide."

Fabrice TRICOIRE, Chief Executive Officer ERGOSS / SARA FOQA Solutions

About Bureau Veritas

Bureau Veritas is a world leader in laboratory testing, inspection and certification services. Created in 1828, the Group has more than 77,000 employees located in more than 1,500 offices and laboratories around the globe. Bureau Veritas helps its clients improve their performance by offering services and innovative solutions, in order to ensure that their assets, products, infrastructure and processes meet standards and regulations in terms of quality, health and safety, environmental protection and social responsibility. Bureau Veritas is listed on Euronext Paris and belongs to the Next 20 index. Compartment A, ISIN code FR 0006174348, stock symbol: BVI. For more information, visit <https://bureauveritas.com>

About ERGOSS

Established in 2009, Ergoss developed the first ever fully cloud based FDM/FOQA software, named SARA, with first release in 2011. Ergoss set-up consists of automated scalability and numerous concurrent users for its software suite, with no IT cost and burden on operator's side. Users are offered unlimited power and storage capacity to process their aircraft flight data, making it possible for individuals to access their analysis and trends, anywhere, anytime, over secured log on. Today (Q3/2019), with over 2000 aircraft constantly forwarding flight data to SARA, Ergoss has Customers in Canada, USA, South America, Europe, Middle East and Asia. With main offices in Toulouse Blagnac, Ergoss also supports Customers from offices in Dallas (USA) and Shanghai (China).
